- Intellij IDEA

📂 PROJECTS

E-Efimerevon
On-Duty Pharmacy App
Jul 2025 – Jul 2025
A native Android application designed as a **comprehensive proof-of-concept** to help users locate pharmacies in Greece, built with a modern, reactive tech stack.
- Developed a fully reactive UI from scratch using **Jetpack Compose** and **Material 3**, following the **MVVM architecture** to create a scalable and maintainable codebase.
- Integrated **Firebase Authentication** for secure user registration and login, and utilized **Cloud Firestore** for storing real-time data such as user profiles and saved favorite pharmacies.
- Implemented an interactive map using **OSMDroid** and **Android Location Services**, featuring advanced, client-side filtering by on-duty status and user-defined radius.
- Engineered complete localization support for both English and Greek, creating a seamless bilingual experience by managing resources and application context effectively.

Technologies Used: Kotlin, Jetpack Compose, MVVM, Coroutines, Firebase (Authentication, Firestore), OSMDroid, Jetpack Navigation, Jetpack Lifecycle, Jetpack DataStore.

Student Supplies Store – Full-Stack E-Shop 🔗
A school project
- Architected and built a full-stack e-commerce platform from the ground up using **Vanilla PHP**, **MySQL**, and **JavaScript**.
- Constructed a comprehensive admin panel enabling full **CRUD** management for products, real-time **order tracking**, and **sales analytics** visualized with **Chart.js**.
- Engineered key user-facing features including dynamic product browsing, a seamless guest checkout system, and full **multilingual (EN/GR)** support.
- Containerized the entire application using **Docker**, ensuring consistent development environments and simplifying deployment.
